Discontinuous spectrum Consumption higher than LED lightings		
Dust proof IP50 	Hygien Easy Cleaning	The ceiling light remains at its best PERFORMANCE No dust, No bacteria

LED professional lightings for the clinic

In order to illuminate the other rooms in your dental practice, or to supplement the lighting in your treatment room, we offer a selection of lamps in order to optimize your entire working environment

From one room to another, the light requirements are different: we must relax in the waiting room, energize the team at the reception, improve traffic flow in the hallways, care in the treatment room, sterilize in the sterilization room. The rooms should be illuminated depending on their use, with a different color light, more or less diffuse, but harmonized to avoid visual stress when patient, physician or assistant traveling.

CAD studies of lighting for your projects

based on the particular lighting constraints and the physical organization of the premises, taking into account the architecture, the decoration and the specific performances of each device: The choice and positioning of the recommended devices ensures ideal lighting.

Degré K is a French company specialising in lighting system applications for the dental sector and is the originator of numerous innovations. Its founder is the AFNOR and ISO international expert for dental lighting.
